

TRAINING — BALL-HANDLING PROGRAM

For athletes needing tight control + rapid decision making.

Built to improve touch, peripheral awareness, rhythm, and ball security under visual load.

Using glasses that block lower half of vision:

BASIC LEVEL

CONTROL DRILLS

1. Stationary Touch Control

Athlete keeps eyes forward; uses hands or feet to maintain continuous control.

Goal: zero drops or mis-touches under lower-half occlusion.

20 seconds × 3

2. Figure-8 Control

Ball moves around legs or cones in a figure-8 pattern; athlete cannot look down.

Improves proprioceptive precision without visual confirmation.

12–15 reps

3. Blind-Zone Catch / Receive

Coach feeds slow passes; athlete receives using touch alone while gaze stays upright.

Touch → Stabilize → Reset.

10–12 reps

MOVEMENT DRILLS

1. Lateral Shuffle Control

Athlete shuffles left/right while maintaining ball control.

Goal: keep ball close while head stays stable and forward.

20 seconds × 3

2. Forward–Backward Transition

Athlete moves forward/backward while dribbling, cradling, or tight-tapping the ball.

Pickup → re-control without looking down.

3 rounds × 15 seconds

3. Change-of-Direction Control

Coach cues “LEFT / RIGHT / BACK”; athlete changes direction without losing control.

Lower-eye occlusion forces predictive foot/hand placement.

12–15 reps

REACTION DRILLS

1. Touch → React

Athlete controls stationary, coach suddenly points “LEFT / RIGHT.”

Athlete bursts 1–2 steps while maintaining touch.

8 reps per side

2. Pocket Awareness Bump

Coach lightly bumps shoulder or applies pad pressure; athlete must absorb contact without losing control.

10–12 reps

3. Peripheral Receive

Coach throws/slides ball from outside athlete’s central vision; athlete maintains forward gaze and traps/catches using peripheral cueing.

12 reps
