

Better Vision Instantly: A Handout for My Eye Doctor

My Goal:

I am an athlete aiming to **achieve better-than-20/20 vision (20/10–20/15)** for **faster reaction time, sharper focus, and better performance.**

What I'm Requesting:

✓ Test for Better-Than-20/20 Vision

- Please refine my prescription to aim for **20/15 or 20/10** if possible.
- Test using high-contrast charts in bright lighting conditions.

✓ Contact Lens or Glasses Options

- I prefer **contacts** for sports (daily disposable, aspheric, high-definition lenses).
- If glasses, high-index, anti-reflective, with precise fitting for sport.
- Consider SHAW lenses if needed to balance image size or binocular function.

✓ Contrast & Clarity

- Discuss **tints, coatings, or lens designs** that enhance contrast and reduce glare.
-

Why This Matters to Me:

Seeing 20/10–20/15 can help me:

- ✓ React faster to balls, opponents, and environmental changes.
 - ✓ Track objects more precisely.
 - ✓ Improve depth perception and peripheral awareness.
 - ✓ Perform at my **highest athletic potential.**
-

🏆 Thank you for helping me achieve my best vision
for peak performance!
