

Better Vision Instantly: A Handout for My Eye Doctor

My Goal:

I am an athlete aiming to achieve **better-than-normal visual acuity (6/4.5–6/3)** for faster reaction time, sharper focus, and improved performance.

What I'm Requesting:

✓ Test for Better-Than-6/6 Vision

- Please refine my prescription to aim for **6/4.5 or 6/3 visual acuity**, if possible
 - Test using **high-contrast charts under bright, optimal lighting conditions**
 - Ensure **binocular balance and clarity at distance**
-

✓ Contact Lens or Glasses Options

- **Contact lenses for sports**
 - Daily disposable lenses
 - Aspheric or high-definition optics
- If prescribing glasses:

- High-index lenses
 - Anti-reflective coating
 - Sport-optimized fitting for stability and field of view
 - Consider **iseikonic or custom lens designs (e.g., SHAW lenses)** if needed for binocular balance
-

Contrast & Clarity Optimization

- Evaluate options for:
 - Contrast-enhancing tints
 - Anti-glare coatings
 - Lens designs that improve visual clarity in dynamic environments
-

Why This Matters to Me:

Achieving **6/4.5–6/3 vision** can help me:

-  React faster to moving objects and opponents
 -  Track the ball more accurately
 -  Improve depth perception and spatial awareness
 -  Enhance peripheral awareness
 -  Perform at a higher athletic level
-

Thank You

Thank you for helping me achieve **elite-level vision for peak performance.**
